Rust Stains

Question: I have several rust stains in the bottom of the pool, how can I get rid of them?

Answer: It really depends on how many rust stains there are. Removing these types of stains can be done with O_2 Safe Shock and Stain Solution $^\#2$, but they have to be spot-treated (it needs that direct contact to be effective). If there are 100+ stains, obviously you are much better off draining and acid washing the pool; if there are a manageable number of stains, here is the process...

1. Place a handful of O_2 Safe Shock in a nylon stocking (knee-high works fine) and a handful of Stain Solution $^\#2$ in a second nylon stocking and tie a knot in each stocking.
2. Place the O_2 Safe Shock over a rust stain and leave for 45-60 seconds.
3. Replace it with the Stain Solution $^\#2$ stocking for 45-60 seconds.
4. Continue moving the stockings from spot to spot until they are all removed.
